

Reichmann Ski & Board Tuning

Reichmann presents innovations at Interalpin in Innsbruck

Reichmann Ski & Board Tuning offers a whole range of new products which could be discovered at the Interalpin trade fair in Innsbruck from 19-21 April. Visitor from all around the world took the opportunity to discover the latest developments in the machine and Rent & Depot range.

Premiere: Slope Master Race with new loading system

A premiere has been awaiting trade fair visitors at Interalpin: the new loading magazine for the Slope Master service robot now offers service staff in the workshop even more convenience and time savings. By loading and unloading 4 pairs of skis or 4 snowboards at the same time, the service employee can use the processing time in the machine for secondary activities and thus work more efficiently.

Software upgrade for SF-4 Race service robot

The latest software generation with Windows 10-based interface ensures even more operating comfort, efficiency and transparency. In addition to the Slope Master service robot, the SF-4 Race service robot now also benefits from the modern user interface with numerous new features. These include a significantly simplified programme and structure creation with an intuitive structure simulator as well as new diagnostic functions and grinding statistics.

Environmentally-friendly ski wax alternative GigaGlide

The advanced formula GigaGlide 2.0 absorbs even faster into the base and creates an appealing glossy surface on the base. The biodegradable water-based formula offers best gliding properties for all snow conditions and completely replaces wax. With the Glide Master applicator, the environmentally friendly ski wax alternative can be applied quickly and easily - without electricity, fumes or brushing out.

Binding adjustment device Diatronic III

Reichmann rounds off its portfolio with the Diatronic III electronic binding adjuster. The Diatronic III complies with current safety standards and offers quick and easy electronic binding adjustment. With the integrated touch panel, a line laser for optimal positioning and integrated tool holders, operation is very convenient and simple. As Reichmann customers are used to, the Diatronic III convinces with a robust and durable design. A wide range of equipment options ensures a high degree of flexibility and optimal adaptation to the customer's needs.

New Depot Locker „Sequence“ for even more individuality

The new line of depot lockers is characterised by a clever configuration and efficient storage and drying of ski equipment. With the further development of ergonomics and shapes, a particularly elegant and at the same time functional locker has been created. The wide variety of selectable materials, fronts and equipment elements allow for a particularly individual configuration.
